Fig. 4 | Performance of 21 method configurations on the ReDeeM dataset. a, Original ReDeeM modalities, hematopoietic hierarchy and expected-direction schematic, followed by RNA velocity stream plots with GDC below method names. Original plotted cell scatter and flow paths are retained; colors denote the cell types labeled in the hematopoietic hierarchy at the top of panel a. **b,** Median CBDir for 11 developmental transitions. The original cell-type direction schematic is repeated at the left of each row, aligned to the corresponding transitions; the CBDir color scale is shown at the right. HSC, hematopoietic stem cell; MPP, multipotent progenitor; CMP, common myeloid progenitor; GMP, granulocyte-monocyte progenitor; MEP, megakaryocytic-erythroid progenitor; MKP, megakaryocyte progenitor; EryP, erythroid precursor; MDP, monocyte-dendritic cell progenitor; Mono, monocyte; LMPP, lymphoid-primed multipotent progenitor; CLP, common lymphoid progenitor; ProB, B cell progenitor.
