Extended Data Fig. 1 | RNA velocity method taxonomy and dyngen simulation datasets

a, RNA velocity methods grouped by modeling strategy and input information. Categories summarize principal strategies and can overlap. Method coverage varies by evaluation task. b, Overview of 42 dyngen simulation datasets, covering 14 topologies with three seed datasets per topology. Original simulated velocity streams and simulated-time colors are retained. Dataset names and experimental design are documented in Table S2; these are input-data illustrations, not new method evaluations.
